SOFTWARE PROJECTS

Vacation Planner — Android Mobile App | WGU Capstone Project | 2025 – 2026

- Built a full-featured Android application in Java using Android Studio that allows users to organize vacations and excursions offline without requiring internet connectivity
- Architected a local SQLite database using the Room Framework with full CRUD support for vacation and excursion entities, enforcing relational integrity between parent and child records
- Implemented real-time search functionality on the vacation list screen using Search View and adapter filtering, enabling users to filter vacations by title as they type
- Developed date validation logic ensuring excursion dates fall within the associated vacation window, with Alarm Manager-based push notifications for upcoming trips and excursions
- Added security features including input sanitization to strip harmful characters from all text fields and maximum character limits to prevent data overflow
- Wrote unit tests covering CRUD operations, date validation logic, and core business rules; deployed final application to a cloud hosting platform with full documentation
- Managed version control through GitLab with a structured branching strategy mapping commits to individual features
